Experience

Backend Developer Intern **Sep 2025 – Feb 2026**

ConviSaaS Inc. (eazyPetition – immigration petition platform) *Remote*

- Built **12+ REST APIs** in **Node.js/Express.js** across **authentication**, **petition form submission**, **case tracking**, **payments/subscriptions (Stripe)** and **document uploads**, consumed by the **React.js** frontend
- Built a **cron-based scheduler** that detects case status updates and sends **email notifications** via **AWS SES** to **paid subscribers**, replacing manual follow-ups and saving ∼**5 hours/week**
- Cut average API response time by ∼**35%** by profiling slow queries and adding **indexes** in **PostgreSQL**
- Implemented **role-based access control**, **request validation** and centralized **error handling** to protect sensitive user and case data
- Shipped **15+ features and bug fixes** through **Git** pull requests and peer code reviews

Projects

Code_ai | *TypeScript, Node.js, LLM APIs, Ink* **GitHub**

- Built a **terminal-based autonomous coding agent** with filesystem, shell and git tools, integrating **Gemini**, **Groq** and **Anthropic** models behind one **provider-agnostic streaming interface**
- Designed an autonomous **read-act loop** that streams a response, reassembles **tool calls** from partial fragments, executes tools and feeds results back, with a **max-turn cap** to bound cost
- Normalized provider quirks into a common **content-block message format**, including handling Gemini's missing tool-call IDs and Groq's raw-text tool calls on some Llama models
- Implemented **context compaction**, **JSONL session persistence** with resume, and **permission prompts** gating write, shell and git tools

UploadRelay | *Go, Redis, AWS S3, FFmpeg, YouTube API* **GitHub — Live**

- Built a **video collaboration platform** where collaborators upload large files through **AWS S3 multipart uploads** with **presigned URLs**, so file data goes straight to S3 and bypasses the backend
- Engineered a **Go** backend with **Redis** and **Asynq** task queues to process videos asynchronously, generating multi-quality **HLS** previews with **FFmpeg** for adaptive streaming
- Implemented an **approval-driven workflow** that streams approved originals from **S3 to YouTube** using **OAuth 2.0** and the **YouTube Data API**

Vercel Clone | *Node.js, Next.js, Docker, BullMQ, Redis, ClickHouse, PostgreSQL, S3* **GitHub — Live**

- Built a self-hosted **deployment platform** that clones a public **GitHub repo**, builds it in a one-off **Docker sandbox**, uploads the output to **S3** and serves it on generated subdomains via a custom **S3 reverse proxy**
- Designed a **BullMQ + Redis** build queue with a Docker-API worker; streamed live build logs to **ClickHouse** and tracked deployment status in **PostgreSQL** (Prisma), with automatic failure and timeout handling
- Hardened sandboxes with non-root users, dropped capabilities, resource limits, an isolated network and no credentials; validated output archives against path traversal and symlinks

Technical Skills

AI & Agents: LLM APIs (Gemini, Groq, Anthropic), Tool/Function Calling, Agentic Workflows, Streaming, Context Management, Prompt Engineering
Languages: TypeScript, JavaScript, Go, Java, SQL
Backend & Data: Node.js, Express.js, REST APIs, PostgreSQL, Redis, Kafka, ClickHouse, Prisma
Cloud & Tools: AWS (S3, ECS, EC2), Docker, Git, GitHub, Ink, React.js, Next.js, Vitest

Education

Maharaja Agrasen Institute of Technology **June 2023 – June 2027**

B.Tech in Computer Science *Delhi*
